

Save labor and labor costs for planting and displaying the pots.

Simplified logistics through the same early pushing through of up to 20 containers in the desired position by just one person.

technical specifications

- galvanized pipes and sheets
- simple modular design
- optionally wire frame and foliage ribbon
- collecting channel for drainage water possible
- suitable for 0.5 m and 1 m substrate container with tendril protection

advantages of TOPRAIL

- the container can be pushed through
- inexpensive and easy assembly
- enormous time savings
- stable and robust design
- can be dismantled again

farming is you.

We are **4DISC** - a community of farmers, fruit growers and machine builders who solve typical problems in agriculture and fruit growing.

We are happy to help! Further information can be found at www.4disc.de.

The innovative
cultivation system

10/2021

Simply **push**
one ore more
container.

system in detail

- 1** The carrier plates hold the horizontal pipes and already have a recess for a conveyor belt and holes for attaching the irrigation system (micro sprinkler or irrigation hose).
- 2** The intermediate plates are used to stabilize and accommodate the conveyor belt.
- 3** The substrate containers can rest on the horizontal tubes and **can be pushed**. At the end pieces there are winders for tensioning the conveyor belt.

The plugged-in components are modular and for small to large systems suitable for self-assembly.
