spreading machine

**Precise  
distribution  
of additives.**

### system in detail

**1** The container that holds the auxiliary materials is made of *polyamide*. It can be swiveled downwards for emptying.

**2** This is the drive for the internal mixing wheel so that the application concentration remains constant.

**3** The metering wheel is made of a very soft *elastomer* to protect the beneficial organisms and additives as much as possible.

**4** The base frame is used to hold the dosing containers.
